ABOUT REVERSE OSMOSIS MEMBRANE

Reverse osmosis is a process in which water is forced through a semi-permeable membrane by applying very strong pressure to the feed - water side of the RO membrane, enabling the water molecules to pass through the membrane to other side. The diameter of the pores or apertures of the high technology RO membrane is 0.0001 micron. This permits only the passage of the water molecule while micro-organism and other solid or dissolved pollutants in the water are denied entry and hence effectively eliminated. The water produced is thus 99.99% pure.

When More Than 70% of our Body Consists of Water

How can we afford to ignore the quality of water we consume daily in various forms.

Water plays a vital role in maintaining & regulating our body system through various natural processes, v.i.z.

- Detoxifying
- Supporting Digestive Process
- Controlling Body Temperature
- Lubricating Joints in the skeletal system.
- Facilitating Metabolism.

Alkaline Filter- Japanese Technology

It consists of 100% natural Japanese alkaline media, Antioxidiser -ve ORP and Silver impregnated activated carbon. Kills 99.9% bacteria and prevent regeneration bacteria in water for last 120 days. Restore pH balance in body, Anti-aging effects, Increase Metabolism, Improve Immune System, Reduces Cholesterol & Blood Sugar Level.

KEY BENEFITS

Anti-aging effects	Improve Blood Circulation	Improve Body Immune System	Increase Metabolism
Restore pH balance in body	Powerful Anti-Oxidants	Supplies Essential Mineral (Ca, Mg, K, Na, Fe, Al, F & Cl)	Neutralizes Acidic Wastes & Uric Acids
			Reduces Cholesterol & Blood Sugar Level

*Alkaline water is not a medicine to cure any disease.
